Overview

Description

The HyLink™ Aster555 Conjugation Kit is designed to label proteins or antibodies with Aster555, a bright orange-red dye. It provides high photostability and signal intensity for applications like flow cytometry, fluorescence microscopy, and immunofluorescence. Optimized for small-scale labeling (100 µg), the kit offers an efficient, easy-to-use protocol that ensures consistent and reproducible results, ideal for demanding multicolor experiments.

Components

Package	Items	Quantity
100 µg × 10	Aster 555	10 vials
	10X Modifier	1 vial
	10X Quencher	1 vial
	SpinDesalt column	10 vials

Shipping

The product is shipped with polar packs to maintain its stability during transit. Upon receipt, store the SpinDesalt Column at 4°C for optimal performance. All other components should be stored immediately at -20°C or lower for long-term preservation.

Stability & Storage

This product is stable after storage at:

- -20°C or -80°C for 12 months under sterile conditions from date of receipt.
- SpinDesalt Column should be store at 2-8°C.

Equilibrate kit to room temperature before use.

Disclaimer : For Research Use or Further Manufacturing Only.
